

Tier 5 Semantic Search — Top 100 Curation Sheet

MLX-backed local semantic index over 121,839 post-arbitration-window emails (bge-small-en-v1.5, 384-dim, cosine similarity). Scored against 10 Litman-attribution queries; 28,300 unique hits at cosine ≥ 0.55 . This sheet presents the 100 highest-scoring hits for human review — each is a candidate § 51 exemplar whose email body contextually resembles Litman-name-use language without necessarily containing a literal token match.

How to Review

For each row: (1) check the date — is it post-arbitration (6/14/2023+)? (2) check the recipient — is it a NGM client (KFU/KSU/etc.)? (3) look up the email natively by Bates in the production; (4) decide whether the content is a citable § 51 use. High-scoring hits near 0.60+ typically pass review. Lower scores (0.55-0.58) are weaker and should be spot-checked. Any hit you accept can be added to the Track 2 binder.
